

Plan the next 100 days, together.

Your business and market specialists, planning the next hundred days as a pair.

Validation is how you find the truth behind your assumptions.

You practised it all week, problem first. These hundred days are where you keep going, with your market specialist beside you.

■ BUSINESS ■ MARKET

The assumptions every idea stands on.

In order. The problem comes before the solution.

- 1 The problem is real, in the form you think it is.
- 2 Your solution is the one people actually want.
- 3 The one who pays will pay what you ask.

The one who pays is often not the one who uses it. For Tomás, a parent pays while the teenager plays.

The canvas you fill together.

Everything you decide today lands on this one page.

BUSINESS BRINGS What you can afford to spend to win one paying customer.		MARKET BRINGS Who pays, and how you reach them past today's alternatives.
DAYS 1-30 • VALIDATE Is the problem real? Does the solution land?	DAYS 30-70 • BETA First users signed up and paying.	DAYS 70-100 • SCALE One channel you can afford. Launch.
BUDGET The money you spend across the hundred days, and on what.		DAY-100 SIGNAL How you know it worked.

THE PLAN, AS ONE LINE

The whole hundred days, in one line.

Validate while you test, win your first **paying users** , then scale one channel.

NOT THREE LOCKED DOORS

You keep checking the problem is real even while you build. All the way through, you ask whether you can make it, reach the customer, and grow without each new customer costing too much.

Confirm the problem, then test your solution.

GOAL

Confirm the problem is real, then see if your solution lands.

Start with the problem. A solution to a problem nobody has is wasted work.

HOW

Put it in front of real people.

Use the lo-fi tests from your market week. Watch what they do, not what they say.

TOMÁS, FILLED IN

Do parents agree their teen quits in the first month? Show ten of them the practice-streak idea and see who asks for it.

Launch the beta and win your first paying users.

GOAL

Get the MVP live and the first 25 users paying.

It need not be full price, but it has to be real money.
Paying is the proof it matters.

HOW

Sign people up one by one.

Onboard them yourself, fix what breaks, and ask the ones who pay why they did.

TOMÁS, FILLED IN

Charge parents two euros a month for the beta. Twenty-five of them paying means the problem is worth solving.

Find one channel you can afford, then launch.

GOAL

Grow one channel and get the app fully launched.

Move from people who tried it as a favour to customers who pay because they need it.

HOW

Test channels for cost, then commit.

Keep the cost of winning a customer under what your business specialist can afford.

TOMÁS, FILLED IN

Try music-school partnerships and a couple of short video ads. Whichever brings parents in cheapest becomes the channel.

What a budget is, and how to set one.

WHAT IT IS

The money you spend across the hundred days.

Plus what you spend it on. Most of it is small: a few tools, a landing page, a little ad test.

HOW TO SET IT

List each cost, then add it up.

Keep it to money you can actually get. A tight budget forces sharper choices.

TOMÁS'S 100-DAY BUDGET

Nothing to talk to parents, forty euros for a landing page, sixty to test two ad videos. A hundred euros for the whole stretch.

How you know each phase worked.

One signal per phase. These are what you measure at day 100.

VALIDATE

**People recognise the problem
and ask for the fix.**

Days 1–30

BETA

25 users signed up and paying.

Days 30–70

SCALE

**One channel at a cost you
can afford.**

Days 70–100

Your turn.

TOGETHER What each of you brings. 10 min	PHASE 1 Validate plan. 20 min	PHASE 2 Beta plan. 20 min	PHASE 3 Scale plan. 15 min	BUDGET Cost it out. 10 min
--	---	---	--	--

Take this back to your team.

WHAT YOU HAVE NOW

A hundred-day plan on one canvas.

The assumptions to test, your three phases, and a budget.
