

Sketch the moment, on paper.

You agreed the solution with your team. Today you make it real enough to test.

You have the solution. Now you make it real.

A prototype is an early, rough version of your product. You make it to test an idea before you build the whole thing.

TODAY · PAPER

Sketch the screens by hand.

This session.

TUE · WIREFRAME

Tidy them into clean boxes.

P2.

WED · BUILD

A rough version you can tap.

P3.

A product is one move, at one moment.

It is the one thing your user does, at the moment that decides whether they come back. The rest is arranged around it.

Tomás's evening, and the one moment in it.

6 PM

Homework done, guitar in
its case.

7 PM

The case stays shut.

The moment it all turns on.

9 PM

Nothing played, the
evening gone.

QUICK ONE • 90 SECONDS

Which moment does the whole product turn on?

It is the 7pm case, the moment he reaches for anything except the guitar. Most rooms name a feature instead.

NAME THE MOVE IN ONE LINE

Write the product as one sentence.

For user at moment we move so outcome .

TOMÁS'S SENTENCE

For a teen at the 7pm case, we put one riff in his hands, so the evening is not lost.

Just the screens, drawn by hand.

A paper prototype is no app and no computer. A few sheets of paper, each one a screen your user would see.

SCREEN 1

One big button: Play.

The move.

SCREEN 2

A short riff to copy.

SCREEN 3

"You played today."

Keep it rough on purpose.

Fidelity is how finished your prototype looks. Grow what it does, keep how it looks plain.

ROUGH

Boxes and words, no colour.

People tell you whether the idea works, because there is nothing pretty to be polite about.

POLISHED

Looks like a real app.

People say it looks nice and stay kind, and you learn nothing about the idea.

Your turn.

MAP

**The screens of the
moment.**

10 min

SKETCH

**Each screen
on paper.**

20 min

STAR

**The screen that is
the move.**

5 min

SHOW

**A partner uses
your paper.**

15 min

List the screens your user moves through at the moment.

- 01 Start where the moment starts, and name each screen in a few words.
- 02 Three to five screens is plenty. Ten means the moment is too wide.
- 03 Write what the user sees and does on each, nothing more.

Draw each screen on its own sheet of paper.

- 01 One screen per sheet. Boxes for things, words for the rest.
- 02 Big and rough. If it looks neat, you spent too long.
- 03 Draw only what the user needs to make the move. Leave the rest off.

Star the screen that is the move, then write your sentence.

- 01 Star the single screen where the move happens. One only.
- 02 Check it is something your user already wants to do.
- 03 Underneath, write your sentence: for [user] at [moment] we [move] so [outcome].

ONE SCREEN STARRED • SENTENCE WRITTEN

Hand the paper to a partner and watch them use it.

- 01 Say one line, then go quiet: "You want to play guitar tonight."
- 02 They tap the paper. You switch screens by hand, like a slow computer.
- 03 Watch where they pause or pick wrong. That is your first lesson.

WHAT YOU NOW HOLD

Paper screens, a starred move, and a sentence.

SCREENS ON PAPER

The moment, drawn by hand.

1

STARRED MOVE

The one screen the product
turns on.

1

PRODUCT SENTENCE

One move at one moment, in
a line.

A prototype you can already hand to a person, on day one.

Tomorrow, it gets sharper.

P2 • PRODUCT DEFINITION

Tidy the paper into a wireframe.

Pick the one feature worth telling a friend about, then write the product brief.
