

Sharpen it down, and write it up.

Yesterday you sketched the moment. Today you pick the one feature that matters, and turn it into a brief.

Try to build everything, and nothing ships.

The vision is a long list, so the product has to commit to one thing first.

The full vision, and what Tomás tells a friend.

THE TEAM BUILT MOST

Tutorials and theory.

Lessons, streaks, a long walk-through.

WHAT HE TELLS
A FRIEND

**One
sentence,
unprompted.**

THE PARTY FEATURE

"It gets me playing at 7."

"And I actually play."

QUICK ONE • 90 SECONDS

Which one feature does Tomás mention?

Most rooms point at the feature the team built most. The answer is the one feature Tomás says out loud: the riff.

HOLD THE GUESS

HUDSON LAB VENTURES

04 / 15

Pick the feature a user repeats to a friend.

PRIDE

Tutorials, theory, dashboard.

What the team built most.

YOUR UNIQUE VALUE

What he
repeats to a
friend.

PARTY

The one riff, and letting go.

The one reason he picks you.

THE POINT

The party feature is your unique value: the single reason a user picks you.
Build that one thing well.

Write your first version in one sentence.

V1 is party feature for user at moment .

TOMÁS'S V1

V1 is just one riff at 7pm, for a teen with a shut case. Tutorials, theory, and the dashboard can wait.

A wireframe is your sketch, drawn tidy.

Same screens, now clean boxes with labels. Still no colour, still plain on purpose.

PAPER • P1

A rough sketch.

Boxes and scribbles, by hand.

TIDY IT UP

**Same
screens,
clean lines.**

WIREFRAME

Clean boxes and labels.

Readable by someone new.

The tool writes up what you decided.

It turns a photo of your wireframe into a product brief: the page that tells a builder exactly what to make.

YOU DO THE THINKING

The scope and the sketch.

You choose the party feature, decide what is in version one, and draw the wireframe.

THE TOOL DOES THE WRITING

Your decisions, written clearly.

It turns your sketch into a clear, shareable brief. It does not invent your product for you.

Your turn.

NAME The party feature. 10 min	LINE In, waits, cut. 25 min	WIREFRAME Redraw it clean. 30 min	BRIEF In the ADAPT platform. 15 min	LOCK Check and lock it. 10 min
---	--	--	--	---

Name the one thing worth telling a friend about.

- 01 Start from your P1 sentence, where the move at the moment lives.
- 02 Ask: what does a user say to a friend, unprompted? One sentence.
- 03 If it sounds like a spec sheet, it is not the party feature yet.

PARTY FEATURE NAMED

HUDSON LAB VENTURES

Sort everything into in, waits, and cut.

- 01 In V1: the party feature, and only what it needs to work.
- 02 Waits: good ideas you build later, once version one is proven.
- 03 Cut: everything else. Be hard about it.

Redraw your starred screens, clean and plain.

- 01 Draw yesterday's screens again, tidy: clean boxes, clear labels.
- 02 Keep it plain. No colour. You want it readable, not pretty.
- 03 Show only what version one needs. The cut things do not appear.

Turn the wireframe into a brief, then lock it.

- 01 Photograph your wireframe into the ADAPT platform.
- 02 Read the brief back as if you were the builder.
- 03 If it reads like one tight version one, lock it for P3.

BRIEF LOCKED • READY FOR P3

WHAT YOU NOW HOLD

One thing, scoped and written down.

1

PARTY FEATURE

What a user tells a friend,
unprompted.

1

V1 LINE

In, waits, and cut, each
with a reason.

1

WIREFRAME

Clean screens a stranger
can follow.

1

PRODUCT BRIEF

Locked, and ready to
build from.

One thing built well, not the whole vision built badly.

Tomorrow, you build it.

P3 • WEDNESDAY AM

Build only version one.

Carry the locked brief and the party feature, and nothing else.

HUDSON LAB VENTURES

FEEDS THE PLAN

What it does, and what it looks like.

Your wireframe and brief become two product pages of the Lean Product Plan.
