

Build it, test it, change one thing.

Yesterday you locked the brief. Today you make it work, put it in front of real people, and change one thing.

WHERE YOU ARE NOW

You have the brief. Now make it work.

To build is to make your wireframe work, so a person can tap through the one move from start to finish.

MON · PAPER

Screens sketched by hand.

Done.

TUE · WIREFRAME

Tidied, and a locked brief.

Done.

TODAY · BUILD

A rough version they can tap.

This session.

Today it gets more real, but no prettier.

Fidelity means how finished it looks. You make it do more today, but keep it looking plain, because plain gets honest answers.

WHAT IT DOES

Goes up today.

It now works from start to finish, so a person can tap through the whole move instead of looking at a picture of it.

HOW IT LOOKS

Stays plain.

Still boxes and labels, with no colour. Keep it plain and people tell you the truth, because there is nothing pretty to be polite about.

Tomás makes his wireframe work.

THE MOVE

One riff at 7pm.

Two screens, one
button, and you can
tap it.

CUT

Tutorials.

Not in version one.

CUT

Theory.

Not in version one.

CUT

Dashboard.

Not in version one.

QUICK ONE • 90 SECONDS

A teen tries it. Predict the one change.

Most teams reach for something big like a dashboard, when the teen simply left the case shut again.

HOLD YOUR GUESS

HUDSON LAB VENTURES

05 / 15

Build A, test it, then make B with one change.

A • BUILT ROUGH

The move, with extras.

Tutorials and a dashboard crept back in.

TEST

**One teen left
it in the case
again.**

B • ROUGHER, SHARPER

Just the move. One big play button.

Extras cut. One song picked for him.

THE POINT

B gets smaller and sharper. The change comes from what the teen actually did with it, not from what you wanted to add.

Questions first, build rough, then change one thing.

STEP ONE	Write three test questions.	Each names a behaviour you can watch.
STEP TWO	Build rough, only what the brief asks.	The smallest thing that answers them.
STEP THREE	Change one thing.	Led by what they did with it.

THE TEST, AS ONE LINE

Write the test as one line.

This works if **user does this** without **prompting** .

TOMÁS, AS A WORKED FILL

Works if a teen opens the case and plays once at 7pm, without anyone telling him to.

YOUR TURN • 70 MIN

Your turn.

QUESTIONS

Three test questions.

10 min

BUILD A

**Make version
one work.**

25 min

TEST

Peers and strangers.

20 min

CHANGE ONE

Make version B.

15 min

Write three test questions, before you build.

- 01 Each question names a behaviour you could watch when a teen uses it.
- 02 Each one can come back no, or it is not worth asking.
- 03 The best questions go into the Field Kit your group takes out this afternoon.

Make version one work, and nothing more.

- 01 Build straight from your locked brief, the one you wrote in P2.
- 02 Make the starred move work end to end, so a person can tap from start to finish.
- 03 The moment the move works, stop. Anything extra is polish you do not need yet.

Test on peers and strangers, and watch what they do.

- 01 Put it in front of peers and strangers, and record what they did.
- 02 Never ask whether they like it. Watch the first 60 seconds.
- 03 The moment they put it down or turn it off shows you the change to make.

BEHAVIOUR RECORDED • CHANGE FOUND

Change one thing and make version B.

ROUGHER AND SHARPER

The one change the test showed you.

The single move the test pointed to, made smaller and clearer.

NOT BIGGER

More polish is not a change.

If you added five things, you built more instead of changing one.

WHAT YOU NOW HOLD

A working version one, tested and changed.

A→B

PROTOTYPE TESTED

One behaviour recorded, one change made from it.

3

QUESTIONS IN THE KIT

Behavioural, and useful past today.

1

CHANGE FOR THIS AFTERNOON

Real users see version B out in the market.

Rougher and sharper than version A, and a real person has used it.

Real users test it. This afternoon.

OUT IN MARKET #2 • WED PM

Behaviour decides.

Watch the first 60 seconds. Note where they drop it.

HUDSON LAB VENTURES

FEEDS THE PLAN

What it looks like, and the proof.

Your tested prototype becomes two pages of the Lean Product Plan.
