

Make it feel real, and prove it matters.

Yesterday you tested a rough version. Today you add the look and feel, and gather proof that your idea solves a real problem.

WHERE YOU ARE NOW

You have real feedback. Now build it out.

You showed a rough version to your team and to real people. Today you take what they showed you and raise your prototype.

MON • PAPER

**Screens sketched
by hand.**

Done.

TUE • WIREFRAME

**Built plain, brief
locked.**

Done.

REALITY CHECK

**Team and real people
reacted.**

Done.

TODAY • RAISE IT

**Add the look,
gather proof.**

This session.

Now you are allowed to make it real.

Fidelity means how finished it looks. You kept it plain all week. Today you can add your brand, your look, the whole experience.

WHAT YOU CAN ADD

The look and the feel.

Brand, colour, the experience, and how you show it: a landing page, app store images, posters, a social post.

WHAT TO KEEP IN MIND

A finished look changes the answers.

Polish makes people kinder, so watch that you are still testing the real thing: the problem, your solution, and the value.

Tomás keeps the one move, and makes it real.

THE MOVE

One riff at 7pm.

Now with his brand
and a real screen.

ADD

A landing page.

One page that sells
the moment.

ADD

App store shots.

The hook, in three
images.

STILL CUT

**Tutorials, theory,
dashboard.**

Not in version one.

QUICK ONE • 90 SECONDS

When people test yours, what might you change?

You have heard from your team and from a few real people already. With that in mind, name the one change you think a proper test would push you toward.

HOLD YOUR PICK

HUDSON LAB VENTURES

05 / 15

Build a version, test it, then change one thing.

A · FIRST BUILD

The move, with a real look.

Say Tomás adds his brand and a landing page.

TEST

**A teen might
open it, then
set it down.**

B · ONE CHANGE

Lead with one song.

He would cut the choosing, keep the look.

THE POINT

The change is led by what a real person does, not by what you feel like adding. A nicer look is fine, as long as you are still testing the problem and the solution.

Build on the feedback you already have.

STEP ONE	Sharpen your test questions.	Use what your team and testers told you.
STEP TWO	Build it out, look and all.	Add fidelity, but keep the focus.
STEP THREE	Test, then change one thing.	Led by what proves the idea.

THE TEST, AS ONE LINE

Write the test as one line.

This works if **user does this** without **prompting** .

TOMÁS, AS A WORKED FILL

Works if a teen opens the case and plays once at 7pm, without anyone telling him to.

Your turn.

FOCUS

Name what to prove.

10 min

BUILD OUT

Fidelity and context.

30 min

TEST

Watch real people.

20 min

CHANGE

**One thing that
matters.**

10 min

Test the product, and the real problem.

- 01 Ask if the product works: a behaviour you can watch them do.
- 02 Ask if the problem is real: do they actually want it solved?
- 03 Each one must be able to come back no, or it is not worth asking.

Build it out, and give it a real feel.

- 01 Start from your locked brief and your working move. That stays the centre.
- 02 Now add the fidelity: your brand, the look, the way it feels.
- 03 Build only what helps you test: a landing page, posters, app store shots, a social post.

Watch what they do, not what they say.

- 01 Put it in front of peers and strangers, and watch the first 60 seconds.
- 02 Never ask whether they like it. A nice look makes people too kind.
- 03 Look for proof of the problem: do they reach for it, or set it down?

Change one thing, and know what you are validating.

CHANGE WHAT MATTERS

Led by the test.

Make the one change a real person pointed you to, the one that helps you prove the idea.

ONE CHANGE • AIMED AT THE PROBLEM

HUDSON LAB VENTURES

NOT THE LOOK

You are not validating the brand.

You are testing that the problem is real, that your solution is right, and that there is value in it.

A real-feeling version, and proof to chase.

1

PROTOTYPE, BUILT OUT

Your move, with a real look and the pieces around it.

2

KINDS OF TEST QUESTION

One for the product, one for the problem.

1

CHANGE AIMED AT PROOF

Led by what a real person did, not the look.

It looks real now, and you are clear on what you still need to prove.

Gather your proof, then pitch it.

OUT IN MARKET • THIS AFTERNOON

Let behaviour decide.

Take it to real users, and gather the evidence that the problem and your solution are real.

HUDSON LAB VENTURES

INTO THE PLAN

Say it with precision.

Your prototype and your proof become the product pages of the Lean Product Plan, so your team can pitch with confidence.
